Based on high-quality products, our NSE6_FWF-6.4 guide torrent has high quality to guarantee your test pass rate, which can achieve 98% to 100%, Come to welcome the coming certification and achievements.

NEW QUESTION: 1 Sie haben ein geeignetes Projekt für die Pilotierung eines Automatisierungstools identifiziert und einen Pilotversuch geplant und durchgeführt. Das Pilotprojekt war erfolgreich und das Tool wird in Ihrem Unternehmen bereitgestellt. Es ist geplant, den Tool-Einsatz für jeweils ein Projekt zu erhöhen. Während dieses Rollouts werden einige Testprozesse geringfügig geändert, um zusätzliche Vorteile durch die Verwendung des Tools zu erzielen. Im Pilotprojekt wurden erstmals einige kleine manuelle Tests automatisiert. Sie überwachen derzeit die Effizienz der Testautomatisierung. Dies zeigt, dass das Automatisierungsregime für die Tests noch nicht ausgereift ist. Welche der folgenden Aussagen ist wahr?
A. Das Pilotprojekt hätte kritisch sein müssen, damit der maximale Nutzen erzielt wird
B. Das für das Projekt definierte Ziel war unangemessen, da das Automatisierungsregime für die automatisierten Tests am Ende des Pilotprojekts noch nicht ausgereift ist.
C. Der für die Bereitstellung dieses Tools verwendete Ansatz richtet sich nach dem Standarderfolgswert für die Bereitstellung
D. Der Testprozess sollte radikal geändert werden, um zusätzliche Vorteile durch die Verwendung des Tools zu erzielen.
Answer: D

NEW QUESTION: 2 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.
Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration. You need to ensure that all of the client computers in the domain perform DNSSEC validation for the fabrikam.com namespace.
Solution: From Windows PowerShell on Server1, you run the Add-DnsServerTrustAnchor cmdlet. Does this meet the goal?
A. No
B. Yes
Answer: A
Explanation: The Add-DnsServerTrustAnchor command adds a trust anchor to a DNS server. A trust anchor (or trust "point") is a public cryptographic key for a signed zone. Trust anchors must be configured on every non-authoritative DNS server that will attempt to validate DNS data. Trust Anchors have no direct relation to DSSEC validation.
