Slow system response doesn't exist.

NEW QUESTION: 1 Joe was asked to secure access to the Cisco Web Security Appliance to prevent unauthorized access. Which four steps should Joe implement to accomplish this goal? (Choose four.) **A.** Put the Cisco WSA Management interface on a private management VLAN. **B.** Implement IP access lists to limit access to the management IP address in the Cisco Web Security Appliance GUI. **C.** Add the Cisco Web Security Appliance IP address to the local access list. **D.** Enable HTTPS access via the GUI/CLI with redirection from HTTP. **E.** Change the netmask on the Cisco WSA Management interface to a 32-bit mask. **F.** Create an MX record for the Cisco Web Security Appliance in DNS. **G.** Replace the Cisco self-signed certificate with a publicly signed certificate. **Answer: A,B,D,G**

NEW QUESTION: 2 Which of the following statements are correct about the HA command `diagnose sys ha reset-uptime`? (Choose two.) **A.** The device this command is executed on is likely to switch from master to slave status if override is disabled. **B.** The device this command is executed on is likely to switch from master to slave status if override is enabled. **C.** This command has no impact on the HA algorithm. **D.** This command resets the uptime variable used in the HA algorithm so it may cause a new master to become elected. **Answer: A,D**

NEW QUESTION: 3 A. Four B. Two C. One D. Three **Answer: D**

NEW QUESTION: 4 You need to implement VMM IPAM to meet the manageability requirements.

To which two groups should you add WOODGROVEBANKvmmuser1? **A.** IPAM MSM Administrators on Server10 **B.** Remote Management Users on Server10 **C.** IPAM ASM Administrators on Server10 **D.** IPAM Administrators on Server10 **E.** Remote Management Users on Server4
Answer: A, B
Explanation: Before you can add an IPAM server to your configuration in VMM, you must perform the following actions:
1. (this has already been done here) On a server running Windows Server 2012 R2, install the IPAM feature by using Add Roles and Features (in Server Manager) or Windows PowerShell commands. Then configure the IPAM server as described in the relevant IPAM documentation.
2. Create or identify a domain account and, to avoid issues with expiration of the password, ensure that the account is set to never expire. Then, on the IPAM server, ensure that the account has at least the minimum necessary permissions by adding the account to the following two groups:
/ IPAM ASM Administrators: A local group that exists on all IPAM servers, and provides permissions for IP address space management (ASM).
/ Remote Management Users: A built-in group that provides access to WMI resources through management protocols, such as WS-Management through the Windows Remote Management service.
Scenario: * Use a domain account named WOODGROVEBANKvmmuser1 to view and modify the IP address space in IPAM. * Server4 is a VMM running Windows Server 2012 R2 * Server10 is IP Address Management (IPAM)
Reference: How to Add an IPAM Server in VMM in System Center 2012 R2
