NEW QUESTION: 1 The implementations group has been using the test bed to do a 'proof-of-concept' that requires both Client 1 and Client 2 to access the WEB Server at 209.65.200.241. After several changes to the network addressing, routing scheme, DHCP services, NTP services, and FHRP services, a trouble ticket has been opened indicating that Client 1 cannot ping the 209.65.200.241 address. Use the supported commands to isolated the cause of this fault and answer the following questions. The fault condition is related to which technology? **A.** VLAN ACL / Port ACL **B.** Switch Virtual Interface **C.** NTP **D.** Access Vlan **E.** Switch-to-Switch Connectivity **F.** Port Security **Answer: E** **Explanation:** Since the Clients are getting an APIPA we know that DHCP is not working. However, upon closer examination of the ASW1 configuration we can see that the problem is not with DHCP, but the fact that the trunks on the port channels are only allowing VLANs 1-9, when the clients belong to VLAN 10. VLAN 10 is not traversing the trunk on ASW1, so the problem is with switch to switch connectivity, specifically the trunk configuration on ASW1.

NEW QUESTION: 2

次の機能のどれがロードバランサーに登録された倍数のアベイラビリティゾーンのAmazon EC2インスタンスへのトラフィックの均等な分配を確実にしますか? **A.** Elastic Load Balancing クロスゾーンロードバランシング **B.** Amazon Route 53 レイテンシルーティングポリシー **C.** Elastic Load Balancing リクエストのルーティング **D.** Amazon Route 53 加重ルーティングポリシー **Answer: A**

NEW QUESTION: 3 A customer needs a networking solution that supports their Microsoft Skype for Business Unified Communications (UC) solution. The architect discovers that user wireless devices are Wi-Fi Multimedia (WMM) capable. Windows policies assign voice traffic DSCP 46 and video traffic DSCP 34. Which potential issue should the architect explain to the customer about the default QoS settings? **A.** The DSCP values place both voice and video traffic in the video WMM queue, so voice does not receive the prioritization that it should. **B.** The DSCP for wireless client

traffic is concealed within the GRE packet on the path from the AP to the controller, and does not take effect. **C.** DSCP is incompatible with WMM. The Aruba APs and controllers instead use 802.1p to mark traffic to and from wireless devices. **D.** The Aruba APs and controllers use different prioritization mechanism from WMM, so they will not accept high priority traffic from the wireless devices. **Answer: A**
