Smart hubB. Layer 3 switchC. Proxy serverD. Layer 2 switch****Answer: B****Explanation:**The question states that the traffic being transported is a mixture of multicast and unicast signals.There are three basic types of network transmissions: broadcasts, which are packets transmitted to every node on the network; unicasts,which are packets transmitted to just one node; and multicasts, which are packets transmitted to a group of nodes.Multicast is a layer 3 feature of IPv4 & IPv6.Therefore, we would need a layer 3 switch (or a router) to reroute the traffic. Unlike layer 2 switches that can only read the contents of the data-link layer protocol header in the packets they process, layer 3 switches can read the (IP) addresses in the network layer protocol header as well.
