**NEW QUESTION: 4**You want to capture column group usage and gather extended statistics for better cardinality estimates for the customers table in the SH schema.Examine the following steps:1. Issue the SELECT DBMS\_STATS.CREATE\_EXTENDED\_STATS('SH', 'CUSTOMERS') from dual statement.2. Execute the dbms\_stats.seed\_col\_usage (null,'SH',500) procedure.3. Execute the required queries on the customers table.4. Issue the select dbms\_stats.report\_col\_usage('SH', 'customers') from dual statement. Identify the correct sequence of steps.**A.** 3, 2, 4, 1**B.** 4, 1, 3, 2**C.** 3, 2, 1, 4**D.** 2, 3, 4, 1**Answer: D****Explanation:** Explanation/Reference:Explanation:Step 1 (2). Seed column usage Oracle must observe a representative workload, in order to determine the appropriate column groups.Using the new

procedure DBMS\_STATS.SEED\_COL\_USAGE, you tell Oracle how long it should observe the workload. Step 2: (3) You don't need to execute all of the queries in your work during this window. You can simply run explain plan for some of your longer running queries to ensure column group information is recorded for these queries. Step 3. (1) Create the column groups. At this point you can get Oracle to automatically create the column groups for each of the tables based on the usage information captured during the monitoring window. You simply have to call the DBMS\_STATS.CREATE\_EXTENDED\_STATS function for each table. This function requires just two arguments, the schema name and the table name. From then on, statistics will be maintained for each column group whenever statistics are gathered on the table. Note: \* DBMS\_STATS.REPORT\_COL\_USAGE reports column usage information and records all the SQL operations the database has processed for a given object. \* The Oracle SQL optimizer has always been ignorant of the implied relationships between data columns within the same table. While the optimizer has traditionally analyzed the distribution of values within a column, he does not collect value-based relationships between columns. \* Creating extended statistics Here are the steps to create extended statistics for related table columns

with dbms\_stats.create\_extended\_stats: 1 - The first step is to create column histograms for the related columns. 2 - Next, we run dbms\_stats.create\_extended\_stats to relate the columns together. Unlike a traditional procedure that is invoked via an execute ("exec") statement, Oracle extended statistics are created via a select statement.
