NEW QUESTION: 1Your company has a private cloud that is managed by using a System Center 2012 infrastructure. The network contains a Microsoft SharePoint Server 2010 server farm. The server farm is hosted on 20 virtual machines. You deploy a custom solution to the SharePoint server farm. The solution requires that a new Web.config file be deployed to all of the front-end servers. You need to identify which front-end servers have an outdated version of the Web.config file. What should you do?
A. From Configuration Manager, deploy a Desired Configuration Management baseline.
B. From Virtual Machine Manager (VMM), deploy a service template.
C. From Operations Manager, create a monitor.
D. From Service Manager, create a Virtual Machine Manager (VMM) connector.
Answer: A
Explanation: Explanation/Reference: Explanation: Desired configuration management in Configuration Manager 2007 allows you to assess the compliance of computers with regard to a number of configurations, such as whether the correct Microsoft Windows operating system versions are installed and configured appropriately, whether all required applications are installed and configured correctly, whether optional applications are configured appropriately, and whether prohibited applications are installed. Additionally, you can check for compliance with software updates and security settings. <http://technet.microsoft.com/en-us/library/bb680553.aspx>
