NEW QUESTION: 1 Adam works as a Software Tester for SecureEnet Inc. He is required to test the software on different operating systems. Adam installs Windows 10 on his laptop, which enables him to create, mount, and boot from VHD files. Which of the following statements are true about Virtual Hard Disk (VHD)? Each correct answer represents a complete solution. (Choose three.)
A. VHD can be used to install a wide variety of operating systems.
B. VHDs are implemented as files that reside on the native host file system.
C. VHD is a file formatted to be structurally different to a physical Hard Disk Drive.
D. VHD allows multiple operating systems to reside on a single host machine
Answer: A,B,D
Explanation: Explanation/Reference: Explanation: A Virtual Hard Disk (VHD) is a file formatted to be structurally identical to a physical Hard Disk Drive. It is typically used in various virtualization packages, and can be used to install a wide variety of operating systems. A Virtual Hard Disk allows multiple operating systems to reside on a single host machine. This method enables developers to test software on different operating systems. VHDs are implemented as files that reside on the native host file system. Native VHD Boot refers to the ability of a physical computer to mount and boot from an operating system contained within a VHD. Windows 10 supports this ability using VHDX files, both with and without a host operating system to be present.

NEW QUESTION: 2 A. Option D
B. Option B
C. Option A
D. Option C
Answer: C
Explanation: Scenario: A search box must be available on all publishing sites. The publishing site design is delivered as a set of HTML files (litwarepublishing.html), CSS (Litwarepublishing.css), and image files from the marketing company.

NEW QUESTION: 3 You have a standalone computer that runs Windows 10 Enterprise. The computer is configured to automatically back up files by using File History. The user of the computer uses the OneDrive desktop app to sync files. The Previous Versions settings from the local group policy of the computer are shown in the following graphic. Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.
Answer: Explanation: Explanation When a file is deleted from the local OneDrive folder with File Explorer, the deletion is replicated to Onedrive.com and the file is moved to the OneDrive recycle bin. The deleted file can therefore be recovered from the Recycle Bin on Onedrive.com. If a user deletes a file from a local drive by using File Explorer, the file cannot be restored. If the file is not in the OneDrive folder, it will not be a file that is synced to onedrive.com. We could use Previous Versions to

restore the file but this is prevented by the Group Policy settings. The "Prevent restoring local previous versions" - Enabled group policy setting would prevent the previous version from being restored. References:
