NEW QUESTION: 4**A.** Option D**B.** Option C**C.** Option F**D.** Option E**E.** Option A**F.** Option B
Answer: BExplanation:- Within the Azure Portal screen, scroll down to Recovery Services (on the left menu), and click on "Create a New Vault" (this is where your VMs will be replicated to) which will bring up a Data Services / Recovery Services / Site Recovery Vault option, select Quick Create - For the name of the Vault, give it something you'd remember, in my case, I'll call it RandsVault, and I'll choose the Region West US since I'm in the Western United States, then

click Create Vault - Once the Vault has been created, click on the Right Arrow next to the name of your vault. Under Setup Recovery, choose "Between an on-premise site and Microsoft Azure" so that you are telling the configuration settings that you are going to be replicating between your on-premise datacenter and Azure in the cloud. - You will now see a list of things you need to do which the first thing is to create a key exchange of certificates between Microsoft Azure and your VMM server.
