The answer must be the beneficial **CPHQ Study Plan** membership discounts that we continuously introduce.

NEW QUESTION: 1A. Option AB. Option B Answer: B

NEW QUESTION: 2 선수가 한번의 운동 중에 잃어버린 체액 양을 평가하는 가장 좋은 방법은 **A. 24 시간 동안의 배뇨 횟수 B. 균형 척도에서 관찰된 운동 선수의 체중 변화 C. 온수로 측정된 재수화 기간 동안 생산된 소변의 양 D. 소변 색상과 표준 색상 차트 비교** **Answer: B**

NEW QUESTION: 3 Refer to the exhibit. Which IP packets will be accepted from EBGp neighbor 10.1.1.1? **A. IP packets with a TTL count in the header that is equal to 2 B. IP packets with a TTL count in the header that is equal to or greater than 253 C. IP packets with a TTL count in the header that is equal to 253 D. IP packets with a TTL count in the header that is equal to or greater than 2** **Answer: B** Explanation: Explanation/Reference: Explanation: neighbor ip-address ttl-security hops hop-count Example: Router(config-router)# neighbor 10.1.1.1 ttl-security hops 2 Configures the maximum number of hops that separate two peers. The hop-count argument is set to number of hops that separate the local and remote peer. If the expected TTL value in the IP packet header is 254, then the number 1 should be configured for the hop-count argument. The range of values is a number from 1 to 254. When this feature is enabled, BGP will accept incoming IP packets with a TTL value that is equal to or greater than the expected TTL value. Packets that are not accepted are silently discarded. The example configuration sets the expected incoming TTL value to at least 253, which is 255 minus the TTL value of 2, and this is the minimum TTL value expected from the BGP peer. The local router will accept the peering session from the 10.1.1.1 neighbor only if it is 1 or 2 hops away. Reference: http://www.cisco.com/c/en/us/td/docs/ios/12_2s/feature/guide/fs_btsh.html
