Moreover, QSDA2021 exam dumps are high quality, because we have experienced experts to compile them, It brings the success of each candidate is also real and effective.

**NEW QUESTION: 1** You have a database application that uses Microsoft SQL Server 2012. You have a query named Query1 that returns four columns from a frequently updated table that has a clustered index. Three of the columns are referenced in the WHERE clause of the query. The three columns are part of a non-clustered index. The fourth column is not referenced in the WHERE clause. Users report that the application begins to run slowly. You determine that the root cause for the performance issue is Query1. You need to optimize the statement. What should you do? **A.** Enable the optimize for ad hoc workloads option. **B.** Include a SET TRANSACTION ISOLATION LEVEL SNAPSHOT statement before you run the query. **C.** Add a columnstore index to cover the query. **D.** Add a LOOP hint to the query. **E.** Include a SET STATISTICS PROFILE ON statement before you run the query. **F.** Include a SET FORCEPLAN ON statement before you run the query. **G.** Include a SET TRANSACTION ISOLATION LEVEL REPEATABLE READ statement before you run the query. **H.** Include a SET TRANSACTION ISOLATION LEVEL SERIALIZABLE statement before you run the query. **I.** Add a FORCESCAN hint to the Attach query. **J.** Cover the unique clustered index with a columnstore index. **K.** Add an INCLUDE clause to the index. **L.** Include a SET STATISTICS SHOWPLAN\_XML ON statement before you run the query. **M.** Add a FORCESEEK hint to the query. **N.** Add a HASH hint to the query. **Answer: L** Explanation: SET SHOWPLAN\_XML (Transact-SQL) causes SQL Server not to execute Transact-SQL statements. Instead, SQL Server returns detailed information about how the statements are going to be executed in the form of a well-defined XML document Incorrect: Not F: Columnstore indexes in the SQL Server Database Engine can be used to significantly speed-up the processing time of common data warehousing queries. Typical data warehousing workloads involve summarizing large amounts of data. But in this question the query is run on a table that is updated frequently, not a warehousing table.
