NEW QUESTION: 2

DynamoDBで大規模なスキャン操作を使用する場合、テーブルのプロビジョニングされたスループットに対するスキャンの影響を最小限に抑えるためにどのような手法を使用できますか？**A.**

テーブルに範囲インデックスを定義します**B.** スキャンのページサイズを小さく設定します**C.**

Explanation:

Because a Scan operation reads an entire page (by default, 1 MB), you can reduce the impact of the scan operation by setting a smaller page size. The Scan operation provides a Limit parameter that you can use to set the page size for your request. Each Scan or Query request that has a smaller page size uses fewer read operations and creates a "pause" between each

request. For example, if each item is 4 KB and you set the page size to 40 items, then a Query request would consume only 40 strongly consistent read operations or 20 eventually consistent read operations. A larger number of smaller Scan or Query operations would allow your other critical requests to succeed without throttling.
