Perhaps you think it hard to believe, CCRN-Adult certification tests are thought as important certification exam to make you prominent in IT workers, Later, you can freely take it everywhere as long as you use it in the Windows system.

Success & money back guarantee.

**NEW QUESTION: 1**Your network contains one Active Directory forest named contoso.com. The forest contains two child domains and six domain controllers. The domain controllers are configured as shown in the following table. You need to ensure that all Active Directory changes are replicated to all of the domain controllers in the forest within 30 minutes. What should you use?  
**A.** Set-ADGroup **B.** Set-ADDomain **C.** Set-ADReplicationSite **D.** Set-ADForest **E.** Set-ADSite **F.** Netdom **G.** Set-ADReplicationSiteLink  
**Answer: C**  
**Explanation:** Explanation/Reference: The Set-ADReplicationSite cmdlet is used to set the properties for an Active Directory site that is being used for replication. Sites are used in Active Directory to either enable clients to discover network resources (published shares, domain controllers) close to the physical location of a client computer or to reduce network traffic over wide area network (WAN) links. Sites can also be used to optimize replication between domain controllers. The parameter -ReplicationSchedule<ActiveDirectorySchedule> specifies the default replication schedule for connections within this site (intra-site replication).  
**Incorrect answers:** Not A: Set-ADSite is a Microsoft Exchange 2013 command. Use the Set-AdSite cmdlet to configure the Exchange settings of Active Directory sites. Not D: The Set-ADReplicationSiteLink cmdlet sets properties on an Active Directory site link. A site link connects two or more sites. Replication site links reflect the administrative policy for how sites interconnect and the methods used to transfer replication traffic. You must connect sites with site links so that domain controllers at each site can replicate Active Directory changes. Not F: The Set-ADForest cmdlet modifies the properties of an Active Directory forest. Replication cannot be configured with this command.  
**Reference:** Technet, Set-ADReplicationSite
