NEW QUESTION: 2 Which IP SLA operation requires the IP SLA responder to be configured on the remote end?
A. CMP jitter
B. TCP connect
C. ICMP echo
D. UDP jitter
Answer: D
Explanation: Cisco IOS IP SLA Responder is a Cisco IOS Software component whose functionality is to respond to Cisco IOS IP SLA request packets. The IP SLA source sends control packets before the operation starts to establish a connection to the responder. Once the control packet is acknowledged, test packets are sent to the responder. The responder inserts a time-stamp when it receives a packet and factors out the destination processing time and adds time-stamps to the sent packets. This feature allows the calculation of unidirectional packet loss, latency, and jitter measurements with the kind of accuracy that is not possible with ping or other dedicated probe testing.
