**NEW QUESTION: 1** For which kind of MPLS deployment is the next-hop-self all keyword used on a BGP neighbor command?  
**A.** inter-AS MPLS VPN option **D**  
**B.** Unified MPLS **C.** MPLS Carrier's carrier **D.** 6VPEE. inter-AS MPLS VPN option **C**  
**Answer: B**  
**Explanation:** Since the core and aggregation parts of the network are integrated and end-to-end LSPs are provided, the Unified MPLS solution is also referred to as "Seamless MPLS." New technologies or protocols are not used here, only MPLS, Label Distribution Protocol (LDP), IGP, and BGP. Since you do not want to distribute the loopback prefixes of the PE routers from one part of the network into another part, you need to carry the prefixes in BGP. The Internal Border Gateway Protocol (iBGP) is used in one network, so the next hop address of the prefixes is the loopback prefixes of the PE routers, which is not known by the IGP in the other parts of the network. This means that the next hop address cannot be used to recurse to an IGP prefix. The trick is to make the ABR routers Route Reflectors (RR) and set the next hop to self, even for the reflected iBGP prefixes. In order for this to work, a new knob is needed. Only the RRs need newer software to support this architecture. Since the RRs advertise the BGP prefixes with the next hop set to themselves, they assign a local MPLS label to the BGP prefixes. This means that in the data plane, the packets forwarded on these end-to-end LSPs have an extra MPLS label in the label stack. The RRs are in the forwarding path. There are two possible scenarios: In both scenarios, the ABR sets the next hop to self for the prefixes advertised (reflected by BGP) by the ABR from the aggregation part of the network into the core part. If this is not done, the ABR needs to redistribute the loopback prefixes of the PEs from the aggregation IGP into the core IGP. If this is done, there is no scalability. In order to set the next hop to self for reflected iBGP routes, you must configure the neighbor x.x.x.x next-hop-self all command. Reference:

**NEW QUESTION: 2** DRAG DROP Background ProseWare, Inc. is a software company that specializes in developing smartphone apps that work on multiple platforms. The main office for the company is located in Atlanta. The company has branch offices in Tokyo and Paris. The company recently published a new game. The game has sold over 10 million copies in the first year. In the same period, 25 million copies of the free version of the game were downloaded. ProseWare also developed a user productivity app named MyNotesPro. Employees Due to the massive demand for the game and for potential new versions and features, ProseWare plans to increase their staff from 100 to 1,000 employees. The employees will be evenly distributed between the three locations. Each employee will have a tablet device that runs Windows 10. ProseWare plans to connect all offices together by using high-speed internet links. Each employee will be issued a smartphone that runs Apple iOS, Android, or Windows 10. The quality assurance (QA) department includes 50 employees. Each QA department employee will be issued three smartphone devices, one device for each of the operating systems. ProseWare uses Microsoft Intune to manage devices. The company has joined the Apple Device Enrollment

program.Current environmentYou create a virtual machine (VM) named RemApp1 in Microsoft Azure by using the Windows Server Remote Desktop Session Host gallery image. Users in the Training department connect to the VM and run several training apps.You have a file server named FILER01 that runs Windows Server 2012 R2.In Azure, you create a virtual network and a DNS record. You implement directory synchronization between the on-premises domain and Azure.You have purchased Remote Desktop Services Client Access Licenses.Business RequirementsAll employees will be given access to a suite of ProseWare premium apps that includes MyNotesPro. You must provide access to the apps by using Azure RemoteApp.The Atlanta corporate headquarters performs training on a weekly basis for all Tokyo and Paris employees. The training is conducted by using Microsoft Skype for Business on Windows 10 Enterprise devices. You configure the devices to display content in the respective language for the location. Some of the trainers in Atlanta speak Japanese or French.The Chief Technology Officer requires the following reports:Technical RequirementsEmployees must be able to download and install the appropriate RemoteApp client for their specific mobile device. The procedure for installing RemoteApp clients differs for each mobile operating system. All users must have access to the Azure RemoteApp infrastructure on their mobile devices in order to access the ProseWare premium apps.All apps must be centrally managed and updated. You must ensure that the apps are available to all employees. Employees must install all apps from a common source location. The ProseWare apps must only be installed on employee devices. You must import RemApp1 into the Azure RemoteApp Template Image Library. RemApp1 will host the Proseware premium apps.Some of the apps must be able to access data kept in the on-premises servers at the Atlanta office.You must design a Work Folders solution on a FILER01. You have the following requirements:You must encrypt all data that is synchronized.You must synchronize settings every 60 minutes.You must restrict the size of each file that is synchronized to 5 gigabytes.You receive the following error message when you attempt to open a Remote Desktop Protocol (RDP) file to make a connection: "The remote session was disconnected because there are no Remote Desktop License Servers available to provide a license. Please contact the server administrator." You need to use the RDP file to sign into the virtual machine as administrator and then fix the issue.In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.Select and Place:**Answer:** Explanation:
