NEW QUESTION: 2A. Option AB. Option DC. Option BD. Option C **Answer: B** Explanation: Unsure about this answer. D: A: The Bridge all site links option in Active Directory must be enabled.

(This option is available in the Active Directory Sites and Services snap-in.) Turning off Bridge all site links can affect the ability of DFS to refer client computers to target computers that have the least expensive connection cost. An Intersite Topology Generator that is running Windows Server 2003 relies on the Bridge all site links option being enabled to generate the intersite cost matrix that DFS requires for its site-costing functionality. If you turn off this option, you must create site links between the Active Directory sites for which you want DFS to calculate accurate site costs. Any sites that are not connected by site links will have the maximum possible cost. For more information about site link bridging, see "Active Directory Replication Topology Technical Reference." <http://faultbucket.ca/2012/08/fixing-a-dfsr-connection-problem/> <http://technet.microsoft.com/en-us/library/cc771941.aspx>
