**NEW QUESTION: 1** Given: Which code, when inserted at one or more marked positions, would allow classes B and C to compile?  
**A.** `public void z() {}` // position 3  
**B.** `@Override` // position 2  
`public void z() {}` // position 3  
**C.** `@Override` // position 3  
`void x () {}` // position 3  
`@Override` // position 3  
`public void z() {}` // position 3  
**D.** `implements A` // position 1  
`@Override` // position 2

**Answer: B**

**NEW QUESTION: 2** A customer has a requirement to automatically create a work order from a service request when the customer service manager approves the request using Workflow. Which object does this action apply to?  
**A.** SRB  
**B.** Ticket  
**C.** Workflow  
**D.** Workorder  
**Answer: A**

**NEW QUESTION: 3** **A.** Set-SenderReputationConfig  
**B.** Set-RecipientFilterConfig  
**C.** Add-ContentFilterPhrase  
**D.** Set-TransportConfig  
**E.** Set-ContentFilterConfig  
**Answer: B,C,E**

**Explanation:** Add-ContentFilterPhrase The Add-ContentFilterPhrase cmdlet adds phrases to the Allow or Block phrases list. Use the Add-ContentFilterPhrase cmdlet to define custom words for the Content Filter agent. A custom word is a word or phrase that the administrator sets for the Content Filter agent to evaluate the content of an e-mail message and apply appropriate filter processing.  
**Syntax Examples**  
**EXAMPLE 1** This example adds the phrase Free credit report to the Block phrase list. Any messages that contain this phrase will be marked as spam by the Content Filtering agent.  
`Add-ContentFilterPhrase -Phrase "Free credit report" -Influence BadWord`  
**Set-ContentFilterConfig** Use the Set-ContentFilterConfig cmdlet to modify the content filter configuration on a Mailbox server or an Edge Transport server.  
**Syntax** `Set-ContentFilterConfig [-BypassedRecipients <MultiValuedProperty>] [-BypassedSenderDomains <MultiValuedProperty>] [-BypassedSenders <MultiValuedProperty>] [-Confirm <SwitchParameter>] [-DomainController <Fqdn>] [-Enabled <$true | $false>] [-ExternalMailEnabled <$true | $false>] [-InternalMailEnabled <$true | $false>] [-OutlookEmailPostmarkValidationEnabled <$true | $false>] [-QuarantineMailbox <SmtpAddress>] [-RejectionResponse <AsciiString>] [-SCLDeleteEnabled <$true | $false>] [-SCLDeleteThreshold <Int32>] [-SCLQuarantineEnabled <$true | $false>] [-SCLQuarantineThreshold <Int32>] [-SCLRejectEnabled <$true | $false>] [-SCLRejectThreshold <Int32>] [-WhatIf <SwitchParameter>]`  
**EXAMPLE 1** This example specifies the sender domain woodgrovebank.com as a bypassed domain. Messages received from that domain bypass the Content Filter agent.  
`Set-ContentFilterConfig -BypassedSenderDomains woodgrovebank.com`  
**Set-RecipientFilterConfig** Use the Set-RecipientFilterConfig cmdlet to enable and configure the Recipient Filter agent.  
**Syntax** `Set-RecipientFilterConfig [-BlockedRecipients <MultiValuedProperty>] [-BlockListEnabled <$true | $false>] [-Confirm <SwitchParameter>] [-DomainController <Fqdn>] [-Enabled <$true | $false>] [-ExternalMailEnabled <$true | $false>] [-InternalMailEnabled <$true | $false>] [-RecipientValidationEnabled <$true | $false>] [-WhatIf <SwitchParameter>]`  
**EXAMPLE 1** This example modifies the Recipient Filter agent configuration so that recipient validation is enabled.  
`Set-RecipientFilterConfig -RecipientValidationEnabled $true`  
**EXAMPLE 2** This example makes the following changes to the Recipient Filter agent configuration: Enables the Blocked Recipients list. Adds two users to the Blocked Recipients list.  
`Set-RecipientFilterConfig -BlockListEnabled $true`

-BlockedRecipients [email&#160;protected],[email&#160;protected] NOT C  
Set-TransportConfig Use the Set-TransportConfig cmdlet to modify the transport configuration settings for the whole Exchange organization. This example configures the Exchange organization to redirect all journaling reports that can't be delivered to the journaling mailbox to the email account [email&#160;protected]. Set-TransportConfig -JournalingReportNdrTo [email&#160;protected] NOT D Set-SenderReputationConfig Use the Set-SenderReputationConfig cmdlet to modify the sender reputation configuration on a Mailbox server or an Edge Transport server. Sender reputation is part of the Exchange anti-spam functionality that blocks messages according to many characteristics of the sender. Sender reputation relies on persisted data about the sender to determine what action, if any, to take on an inbound message. The Protocol Analysis agent is the underlying agent for sender reputation functionality. When you configure anti-spam agents on an Exchange server, the agents act on messages cumulatively to reduce the number of unsolicited messages that enter the organization. Syntax EXAMPLE 1 This example makes the following modifications to the sender reputation configuration: It sets the sender reputation action to block all senders whose sender reputation level (SRL) rating exceeds the SRL threshold. It sets the SRL blocking threshold to 6. It sets the number of hours that senders are put on the blocked senders list to 36 hours. Set-SenderReputationConfig -SenderBlockingEnabled \$true -SrlBlockThreshold 6 -SenderBlockingPeriod 36 Add-ContentFilterPhrase: Exchange 2013 Help Set-ContentFilterConfig: Exchange 2013 Help Set-RecipientFilterConfig: Exchange 2013 Help
