NEW QUESTION: 1 Book value per share is based on the number of shares outstanding at the end of accounting period rather than the weighted average used in computing earning per share. Also, book value normally is computed without considering:
A. Maximum potential dilution
B. Anti-dilutives and their effects
C. Possible dilutive effects of conversions
D. Treasury stock
Answer: C

NEW QUESTION: 2 Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1. Server1 runs Windows Server 2012 R2 and has the Hyper-V server role installed. On Server1, you create and start a virtual machine named VM1. VM1 is configured as shown in the following table. You plan to create a snapshot of VM1. You need to recommend a solution to minimize the amount of disk space used for the snapshot of VM1. What should you do before you create the checkpoint?
A. Decrease the Minimum RAM.
B. Convert disk1.vhdx to a dynamically expanding disk.
C. Run the Stop-VM cmdlet.
D. Configure VM1 to have a smaller virtual disk.
Answer: C
Explanation: For checkpoints created when the virtual machine is stopped The checkpoint contains the state of the hard disks only. For checkpoints created when the virtual machine is running The checkpoint contains the state of the hard disks and the data in memory. Note: A checkpoint saves the state of each virtual hard disk that is attached to a virtual machine and all of the hard disk's contents, including application data files. For virtual machines on Hyper-V and VMware ESX Server hosts, a checkpoint also saves the hardware configuration information. By creating checkpoints for a virtual machine, you can restore the virtual machine to a previous state.

NEW QUESTION: 3 Refer to the exhibit. For what is the module labeled "E" used?
A. Director A Front-end Connectivity
B. Director A Back-end Connectivity
C. Director A WAN COM Connectivity
D. Director A Local Com Connectivity
Answer: A
