**NEW QUESTION: 1**What is the tool Firewalk used for?**A.** To test the webserver configuration**B.** To test a firewall for proper operation**C.** To determine what rules are in place for a firewall**D.** Firewalk is a firewall auto configuration tool**E.** To test the IDS for proper operation**Answer: C**  
Explanation:Firewalk is an active reconnaissance network security tool that attempts to determine what layer 4 protocols a given IP forwarding device "firewall" will pass. Firewalk works by sending out TCP or UDP packets with a TTL one greater than the targeted gateway. If the gateway allows the traffic, it will forward the packets to the next hop where they will expire and elicit an ICMP\_TIME\_EXCEEDED message. If the gateway host does not allow the traffic, it will likely drop the packets and no response will be returned.

**NEW QUESTION: 2**When terminating a compute instance, you want to preserve the boot volume and its data.Which step will you need to perform?**A.** You cannot preserve the boot volume; it will always be deleted when you terminate the instance.**B.** Reboot the instance first, and then terminate the instance.**C.** Before terminating the instance, you must detach the boot volume.**D.** Disable the default option to delete the boot volume when terminating an instance.**Answer: D**  
Explanation:References:The dialog will show you when you terminate the instance. If you want to preserve the boot volume associated with the instance, uncheck Permanently delete the attached Boot Volume.  
<https://docs.cloud.oracle.com/iaas/Content/Compute/Tasks/terminatinginstance.htm>
