**NEW QUESTION: 1** Which two primary tasks are required before a user can collect data on assets in the asset system? (Select two.) **A.** configure the data collectors **B.** create reconciliation rules **C.** register a CCS Manager **D.** apply tags to the assets **E.** create asset groups **Answer: A,C**

**NEW QUESTION: 2** What reporting options are available as part of analytics within SAP Marketing Cloud? Note: There are 2 correct answer: to this question. **A.** Operational reports **B.** Consumer reports **C.** System reports **D.** Analytics Stories **Answer: A,C**

**NEW QUESTION: 3** Your network contains a Hyper-V host named Server1 that runs Windows Server 2012 R2. Server1 hosts a virtual machine named VM1 that runs Windows Server 2012 R2. You take a snapshot of VM1, and then you install an application on VM1. You verify that the application runs properly. You need to ensure that the current state of VM1 is contained in a single virtual hard disk file. The solution must minimize the amount of downtime on VM1. What should you do? **A.** From a command prompt, run `dism.exe` and specify the `/delete-image` parameter. **B.** From Hyper-V Manager, delete the snapshot. **C.** From Hyper-V Manager, inspect the virtual hard disk. **D.** From a command prompt, run `dism.exe` and specify the `/commit-image` parameter. **Answer: B**  
Explanation: Explanation/Reference: Explanation: Virtual machine snapshots are file-based snapshots of the state, disk data, and configuration of a virtual machine at a specific point in time. You can take multiple snapshots of a virtual machine, even while it is running. You can then revert the virtual machine to any of the previous states by applying a snapshot to the virtual machine. Taking a snapshot of a VM is to in essence freeze the current state and make it a parent disk based on current state, and at the same time create a child disk to capture all subsequent changes. - See more at: Snapshots require adequate storage space. Snapshots are stored as `.avhd` files in the same location as the virtual hard disk. Taking multiple snapshots can quickly consume a large amount of storage space. When you use Hyper-V Manager to delete a snapshot, the snapshot is removed from the snapshot tree but the `.avhd` file is not deleted until you turn off the virtual machine.

**NEW QUESTION: 4** JB has fixed costs of \$120,000 per annum. It manufactures a single product which it sells for \$12 per unit. It has a profit/volume ratio of 60%. JB's break-even point is? **Answer: Explanation: 16671 units**
