**NEW QUESTION: 4**HOTSPOTYou manage a network that includes an on-premises Active Directory Domain Services domain and an Azure Active Directory (Azure AD).Employees are required to use different accounts when using on-premises or cloud resources. You must recommend a solution that lets employees sign in to all company resources by using a single account.The solution must implement an identity provider.You need provide guidance on the different identity providers.How should you describe each identity provider? To answer, select the appropriate description from each list in the answer area.NOTE: Each correct selection is worth one point.**Answer:** Explanation:Synchronized identity is the simplest way to synchronize on-premises directory objects (users and groups) with Azure AD.While synchronized identity is the easiest and quickest method, your users still need to maintain a separate password for cloud-based resources. To avoid this, you can also (optionally) synchronize a hash of user passwords to your Azure AD directory. Synchronizing password hashes enables users to log in to cloud-based organizational resources with the same user name and password that they use on-premises. Azure AD Connect periodically checks your on-premises directory for changes and keeps your Azure AD directory synchronized. When a user attribute or password is changed on-premises Active Directory, it is automatically updated in Azure AD.Federated identity:For more control over how users access Office 365 and other cloud services, you can set up

directory synchronization with single sign-on (SSO) using Active Directory Federation Services (AD FS). Federating your user's sign-ins with AD FS delegates authentication to an on-premises server that validates user credentials. In this model, on-premises Active Directory credentials are never passed to Azure AD.
