NEW QUESTION: 1Your network contains a domain controller named DC1 and a member server named Server1.You save a copy of the Active Directory Web Service (ADWS) event log on DC1. You copy the log toServer1.You open the event log file on Server1 and discover that the event description information is unavailable.You need to ensure that the event log file displays the same information when the file is open on Server1.What should you do on Server1?**A.** Import a custom view.**B.** Copy the SYSVOL folder to DC1.**C.** Copy the LocaleMetaData folder from DC1.**D.** Create a custom view.**Answer: C****Explanation:**To troubleshoot events that were logged on a remote computer, you must export and archive the log with the display information. The display information for the saved events is stored in the LocaleMetaData folder and should be moved with the log information when the information is viewed on another computer.Reference: <http://technet.microsoft.com/en-us/library/cc749339.aspx> SYSVOL does not contain information about how to interpret Event logs. Custom views simply allow us to control which events we can view, but do not provide the metadata required to interpret certain types of events.
