D. syslog_srv_3
Answer: D

NEW QUESTION: 2Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment. The customer previously installed all applications locally on managed laptops and desktops but is willing to evaluate other application delivery methods as part of the new deployment. The environment will be standardized on Windows 10 and Windows Server 2016 for the Virtual Delivery Agent (VDA) machines. As part of an application analysis performed earlier in the project, the information in the Exhibit was collected regarding one of the required applications. Click the Exhibit button to view the information. The customer has an additional objective to minimize the number of network traffic in the environment, particularly on WAN or metered links. How should the architect install the application?
A. Stream it to a VDA machine using Microsoft App-V and accessed through a virtual desktop session
B. Directly on a VDA machine image and accesses through a virtual desktop session
C. Directly on a Server OS VDA machine and accessed from the endpoint as a published application
D. In the Application Layer using Citrix App Layering
E. Directly on endpoint devices and included in a virtual desktop session using the Local App Access feature
Answer: E
Explanation: Note: since the techs must occasionally conduct outdoor field experiments with the lidar scanner and connect to the env. using wireless mobile connection the APP needs to be installed on the end point.

NEW QUESTION: 3A user has launched an EBS backed instance with EC2-Classic. The user stops and starts the instance. Which of the below mentioned statements is not true with respect to the stop/start action?
A. The Elastic IP remains associated with the instance
B. The instance may run on a new host computer
C. The volume is preserved
D. The instance gets new private and public IP addresses
Answer: A
Explanation: A user can always stop/start an EBS backed EC2 instance. When the user stops the instance, it first enters the stopping state, and then the stopped state. AWS does not charge the running cost but charges only for the EBS storage cost. If the instance is running in EC2-Classic, it receives a new private IP address; as the

Elastic IP address (EIP. associated with the instance is no longer associated with that instance.
