NEW QUESTION: 1What is the "focus" of a Focus report?**A.** events that have been missed**B.** a subset of a larger (e.g., monthly or quarterly) report**C.** the differences between two similar reports**D.** high priority Correlation events only**Answer: B**

NEW QUESTION: 2**A.** Option D**B.** Option C**C.** Option A**D.** Option B**Answer: B****Explanation:** Amazon RDS provides high availability and failover support for DB instances using Multi-AZ deployments. In a Multi-AZ deployment, Amazon RDS automatically provisions and maintains a synchronous standby replica in a different Availability Zone. The primary DB instance is synchronously replicated across Availability Zones to a standby replica to provide data redundancy, eliminate I/O freezes, and minimize latency spikes during system backups. Running a DB instance with high availability can enhance availability during planned system maintenance, and help protect your databases against DB instance failure and Availability Zone disruption. Note that the high-availability feature is not a scaling solution for read-only scenarios; you cannot use a standby replica to serve read traffic. To service read-only traffic, you should use a read replica. Reference: <http://docs.aws.amazon.com/AmazonRDS/latest/UserGuide/Concepts.MultiAZ.html>

NEW QUESTION: 3On an N-Series switch, which three outputs display when a network engineer runs the command `show system`? (Choose three.)**A.** System name**B.** Interface status**C.** Fan status**D.** VLAN information**E.** Unit Temperature state**F.** OS version**Answer: A,C,E**
