NEW QUESTION: 4DRAG DROP**Answer:** Explanation:Explanation:Box 1: 95%Box 2: 5%Box 3: 0%Box 4: 0%Note:* From the exhibit we have:NPS01: weight 30, priority: 5NPS02: weight 50, priority: 90NPS03: weight 20, priority: 5Box 3: If NPS03 is unavailable it cannot handle any

requests.Box 4: NPS04 is not mentioned in this question.* Priority. Priority specifies the order of importance of the RADIUS server to the NPS proxy server. Priority level must be assigned a value that is an integer, such as 1, 2, or 3. The lower the number, the higher priority the NPS proxy gives to the RADIUS server. For example, if the RADIUS server is assigned the highest priority of 1, the NPS proxy sends connection requests to the RADIUS server first; if servers with priority 1 are not available,NPS then sends connection requests to RADIUS servers with priority 2, and so on. You can assign the same priority to multiple RADIUS servers, and then use the Weight setting to load balance between them.* Weight. NPS uses this Weight setting to determine how many connection requests to send to each group member when the group members have the same priority level. Weight setting must be assigned a value between 1 and 100, and the value represents a percentage of 100 percent. For example, if the remote RADIUS server group contains two members that both have a priority level of 1 and a weight rating of 50, the NPS proxy forwards 50 percent of the connection requests to each RADIUS server.
