NEW QUESTION: 1Which network model is first introduced?**A.** TCP/IP Model**B.** BNN Model**C.** HTTP Model**D.** OSI Model**Answer: A**

NEW QUESTION: 2

ユーザーは、Linuxインスタンスに接続された新しい空のEBSボリュームでコマンド「dd if=/dev/zero of=/dev/xvdfbs=

1M」を実行します。上記のコマンドでユーザーが実行しているアクティビティは次のうちどれですか？**A.** EBSボリュームのフォーマット**B.** EBSボリュームでのファイルシステムの作成**C.**

EBSボリュームを事前に温めます**D.** デバイスをインスタンスにマウントします**Answer: C**

Explanation:ExplanationWhen the user creates a new EBS volume and is trying to access it for the first time it will encounter reduced IOPS due to wiping or initiating of the block storage. To avoid this as well as achieve the best performance it is required to pre warm the EBS volume. For a blank volume attached with a Linux OS, the "dd" command is used to write to all the blocks on the device. In the command "dd if=/dev/zero of=/dev/xvdfbs=1M" the parameter "if=import file" should be set to one of the Linux virtual devices, such as /dev/zero. The "of=output file" parameter should be set to the drive that the user wishes to warm. The "bs" parameter sets the block size of the write operation; for optimal performance, this should be set to 1 MB.

NEW QUESTION: 3An appropriate technique for planning and controlling manufacturing inventories, such as raw materials, components, and subassemblies whose demand depends on the level of production is:**A.** Capital budgeting.**B.** Regression analysis.**C.** Linear programming.**D.** Materials requirements planning.**Answer: D**Explanation:Materials requirements planning (MRP) is a system that translates a production schedule into requirements for each component needed to meet the schedule. It is usually implemented in the form of a computer-based information system designed to plan and control raw materials used in production. It assumes that forecasted demand is reasonably accurate and that suppliers can deliver based upon this accurate schedule. MRP is a centralized push-through system, output based on forecasted demand is pushed through to the next department or to inventory.
