Therefore even the average 1z0-808 exam candidates can grasp all study questions without any difficulty.

NEW QUESTION: 1 Which three are true about Smart Flash log? **A.** LGWR will not wait for writes to Smart Flash log if the write to a disk based log file completes first. **B.** You can remove Smart Flash Log from a single storage server with the drop flashing command. **C.** I/O Manager category plans can be used to enable or disable Smart Flash Log For different I/O categories. **D.** Smart Flash Log is enabled by default, using 1024 MB of Flash storage on each storage server. **E.** I/O Resource Manager database plans can be used to enable or disable Smart Flash Log for different databases. **Answer: A,B,E** **Explanation:** A: the Exadata I/O Resource Manager (IORM) has been enhanced to enable or disable Smart Flash Logging for the different databases running on the Database Machine. B: Smart Flash Logging works as follows. When receiving a redo log write request, Exadata will do parallel writes to the on-disk redo logs as well as a small amount of space reserved in the flash hardware. When either of these writes has successfully completed the database will be immediately notified of completion. If the disk drives hosting the logs experience slow response times, then the Exadata Smart Flash Cache will provide a faster log write response time. Conversely, if the Exadata Smart Flash Cache is temporarily experiencing slow response times (e.g., due to wear leveling algorithms), then the disk drive will provide a faster response time. This algorithm will significantly smooth out redo write response times and provide overall better database performance. D: Category plans are configured and enabled using the CellCLI utility on the cell. Only one category plan can be enabled at a time. **Incorrect:** Not C: By default, 512 MB of the Exadata flash is allocated to Smart Flash Logging

NEW QUESTION: 2 Given the code fragment:

```
public static void main(String[] args) {Path file = Paths.get("D:\company\report.txt");try (SeekableByteChannel sbc = Files.newByteChannel(file,new OpenOption[] {sbc.position(5);sbc.truncate(30);}) catch (IOException e) {System.err.println("Caught IOException: " + e.getMessage());}}
```

What is the result if the report.txt file contains Welcome to the world of Java? **A.** A NonWritableChannelException is thrown at runtime. **B.** The file contains the first four characters. **C.** The contents of the file remain unchanged. **D.** The file contains the first five characters. **Answer: C** **Explanation:** The truncate line will not change the file since the file size is less than 30. **Reference:** Interface SeekableByteChannel

NEW QUESTION: 3 Hot Area: **Answer:** Explanation:

NEW QUESTION: 4 DRAG DROP You work as a Help Desk Technician for Net Perfect Inc. You use Excel 2010 to create different reports for your company. Drag and drop the appropriate methods for efficient data entry in front of their descriptions. **Answer:** Explanation:
