If you have a good comments or suggestions **C1000-058 Test Score Report** during the trial period, you can also give us feedback in a timely manner.

NEW QUESTION: 1Which two attributes can you use to group shipment lines into a single shipment? (Choose two.)**A. FOBB. CarrierC. Ship-to locationD. Sales OrderE. Item****Answer: A,C**
Explanation:ExplanationA shipment comprises a set of shipment lines, grouped by certaincommon shipping attributes, that are scheduled to be shipped to a customer's ship-to location on a specific date and time. You can include items from different sales orders in a shipment. You can either manually or automatically group shipment lines to create a shipment. The shipment lines are grouped by the mandatory default criteria: ship-from location and ship-to location.However, you may also include additional grouping criteria, such as customer, freight terms, FOB (Free on board), and shipping method.

NEW QUESTION: 2Which two elements are configured to implement dialing privileges in Cisco Unified Communication Manager? (Choose two)**A. PartitionsB. Route mapsC. Calling Search spacesD. Firewall rulesE. SubnetsF. Access listsG. Wildcard masksH. Autonomous system**

numbers
Answer: A,C

NEW QUESTION: 3 You have an Azure web app named App1 that has two deployment slots named Production and Staging. Each slot has the unique settings shown in the following table. You perform a slot swap. What are the configurations of the Production slot after the swap? To answer, select the appropriate options in the answer area. **NOTE:** Each correction is worth one point.

Answer: Explanation: Explanation Which settings are swapped? When you clone configuration from another deployment slot, the cloned configuration is editable. Some configuration elements follow the content across a swap (not slot specific), whereas other configuration elements stay in the same slot after a swap (slot specific). The following lists show the settings that change when you swap slots.
Box 1 : On Settings that are swapped:
General settings, such as framework version, 32/64-bit, web sockets
App settings (can be configured to stick to a slot)
Connection strings (can be configured to stick to a slot)
Handler mappings
Public certificates
WebJobs content
Hybrid connections *
Virtual network integration *
Service endpoints *
Azure Content Delivery Network *
Features marked with an asterisk (*) are planned to be unswapped. So web sockets settings will be swapped. So Production will have web sockets settings from "Off" to "On" after the swap slot.
Box 2: App1-prod.contoso.com
Settings that aren't swapped:
Publishing endpoints
Custom domain names
Non-public certificates and TLS/SSL settings
Scale settings
WebJobs schedulers
IP restrictions
Always On Diagnostic settings
Cross-origin resource sharing (CORS)
So Custom domain names will not be swapped. So Production will have Custom domain names of its own after the swap slot.
