**NEW QUESTION: 1**A system administrator needs to deploy a new enterprise application which requires that application security be enabled, but, the existing applications in the cell cannot be executed with application security enabled. The cell has the global security and Java 2 security disabled. How can the administrator handle this requirement?**A.** Enable administrative security for the cell. Create a security domain with application security enabled. Associate the security domain to the new cluster where the new application is deployed.**B.** Enable administrative security for the cell. Create a security domain with application security enabled. Associate the security domain at the application level for the new application.**C.** Enable Java 2 security for the cell. Create a security domain with application security enabled. Associate the security domain to a new cluster to be used to deploy the new application.**D.** Enable Java 2 security for the cell. Create a security domain with application security enabled. Associate the security domain to the new application.**Answer: B**Explanation:Explanation/Reference:When Java 2 security is enabled for a WebSphere Application Server, all the applications that run on WebSphere Application Server undergo a security check before accessing system resources. An application might need a was.policy file if it accesses resources that require more permissions than those granted in the default app.policy fileReferences:
