**Answer: F**Explanation:let's suppose it is a /20 then we would have addresses from 192.168.0.1 to 192.168.15.255Now let's suppose it is a /21 then we would have addresses from 192.168.8.1 to 192.168.15.255So both summaries encompass the networks we want to summarize but the second one is the most restrictive one as it only encompasses the networks we were asked to summarize and not others so it is the correct summary.In fact just count the number of subnets which is 8 and find the exponent of 2 which is 8, that gives you 3 and to find out the summary mask just do /24 - 3 = /21.if you make it in binary you'll find out the answer too:the interesting octet is 3rd one so let's convert in binary.8 0000 10009 0000 100110 0000 101011 0000 101112 0000 110013 0000 110114 0000 111015 0000 1111I've bolded the bits in common there are 5 so 16+5=21 which is mask and address is 192.168.8.0
