You establish a two-way forest trust between the forests. The network contains three servers. The servers are configured as shown in the following table. You confirm that the client computers in each forest can resolve the names of the client computers in both forests. On dc1.litwareinc.com, you create a zone named GlobalNames. You need to recommend changes in both forests to ensure that the users in both forests can resolve single-label names by using the GlobalNames zone in litwareinc.com. Which changes should you recommend? To answer, drag the appropriate configuration to the correct server in the answer area. Each configuration may be used once, more than once, or not at all. Additionally, you may need to drag the split bar between panes or scroll to view content.
Answer: Explanation: Explanation: Deploying a GlobalNames zone
The specific steps for deploying a GlobalNames zone can vary somewhat, depending on the AD DS topology of your network.
Step 1: Create the GlobalNames zone
Step 2 (Box 1, box 3) : Enable GlobalNames zone support
The GlobalNames zone is not available to provide name resolution until GlobalNames
