Generally speaking, in this materialistic society, money means [701-100 Reliable Test Syllabus](#) high social status, You won't find anything difficult, and we want to help you succeed, which is why we offer a free demo.

NEW QUESTION: 1When building a campus network, which of the following protocols can be used to avoid Layer 2 loops?**A. RSTPB. SNMPC. OSPFD. NAT****Answer: A**

NEW QUESTION: 2Refer to the exhibit.Which two objects are created as a result of the configuration? (Choose two.)**A. VRFB. application profileC. attachable AEPD. endpoint groupE. bridge domain****Answer: A,E**

NEW QUESTION: 3Your network consists of one Active directory domain. The functional level of the domain is Windows Server 2008 R2. Your company has three departments named Sales, Marketing, and Engineering. All users in the domain are in an organizational unit (OU) named AllUsers.You have three custom applications. You deploy all custom applications by using a Group Policy object (GPO) named AppInstall.The Sales department purchases a new application that is only licensed for use by the Sales department.You need to recommend a solution to simplify the distribution of the new application.The solution must meet the following requirements:-The application must only be distributed to licensed users.-The amount of administrative effort required to manage the users must remain unaffected.-The three custom applications must be distributed to all existing and new users on the network. What should you recommend?**A. Create a new group for each department. Filter the AppInstall GPO to the Marketing group and the Engineering group. Create a new GPO. Link the new GPO to the domain. Filter the new GPO to the Sales group.B. Create a new group for each department and filter the AppInstall GPO to each group. Create a new GPO. Link the new GPO to the domain. Filter the new GPO to the Sales group.C. Create a new child OU for each department. Link the AppInstall GPO to the Marketing OU and the Engineering OU. Create a new GPO. Link the new GPO to the Sales OU.D. Create a new child domain for each department and link the AppInstall GPO to each child domain. Create a new GPO. Link the new GPO to the Sales domain.**

Answer: BExplanation:To ensure that the other applications are distributed to all existing and new users on the network, you need to create a new group for each department and filter the InstallApp GPO to each group. Filtering allows you to target only specific computers or users. You can create and modify multiple preference items within each GPO, and you can filter each preference item to target only specific computers or users. Finally to simplify the distribution of the licensed application to the users of the sales department, you need to create and link a new GPO to the domain and filter the new GPO to the Sales group. You should not filter the InstallApp GPO to the Marketing group and the Development groups only because all the other applications beside the licensed application need to be installed to the Sales department also. Reference: Group Policy/ Preferences
