NEW QUESTION: 1 Assume that you have the field A, B, C, and D and you wish to find the sum of values even if there are \$null\$ missing values in one or more fields. Which expression would accomplish this task? **A.** sum_n([A, B, C, D]) **B.** to_real (A)+ to_real (B)+ to_real (C)+ to_real (D) **C.** A+B+C+D **D.** sum_n(A B C D) **Answer: A**

NEW QUESTION: 2 Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. You have a database that contains tables named Customer_CRMSystem and Customer_HRSystem. Both tables use the following structure: The tables include the following records: Customer_CRMSystem Customer_HRSystem Records that contain null values for CustomerCode can be uniquely identified by CustomerName. You need to display a Cartesian product, combining both tables. Which Transact-SQL statement should you run? **A.** B:C:D:E:F:G:H: **A.** Option B **B.** Option C **C.** Option A **D.** Option D **E.** Option F **F.** Option E **G.** Option H **H.** Option G **Answer: H** Explanation: Explanation/Reference: Explanation: A cross join that does not have a WHERE clause produces the Cartesian product of the tables involved in the join. The size of a Cartesian product result set is the number of rows in the first table multiplied by the number of rows in the second table. References: [https://technet.microsoft.com/en-us/library/ms190690\(v=sql.105\).aspx](https://technet.microsoft.com/en-us/library/ms190690(v=sql.105).aspx)

NEW QUESTION: 3 Your company is planning on using the available services in AWS to completely automate their integration, build and deployment process. They are planning on using AWS CodeBuild to build their artefacts. When using CodeBuild, which of the following files specifies a collection of build commands that can be used by the service during the build process? **A.** appspec.json **B.** appspec.yml **C.** buildspec.xml **D.** buildspec.yml **Answer: D** Explanation: Explanation The AWS documentation mentions the following AWS CodeBuild currently supports building from the following source code repository providers. The source code must contain a build specification (build spec) file, or the build spec must be declared as part of a build project definition. A buildspec is a collection of build commands and related settings, in YAML format, that AWS CodeBuild uses to run a build. For more information on AWS CodeBuild, please refer to the below link: <http://docs.aws.amazon.com/codebuild/latest/userguide/planning.html>
