NEW QUESTION: 4 Azure Stream Analytics機能を実装しています。

各要件に対してどのウィンドウ関数を使用する必要がありますか? 回答するには、回答エリアで適切なオプションを選択します。注: それぞれの正しい選択には1ポイントの価値があります。

Answer: **Explanation:** **Explanation** Box 1: Tumbling Tumbling window functions are used to segment a data stream into distinct time segments and perform a function against them, such as the example below. The key differentiators of a Tumbling window are that they repeat, do not overlap, and an event cannot belong to more than one tumbling window. Box 2: Hopping Hopping window functions hop forward in time by a fixed period. It may be easy to think of

them as Tumbling windows that can overlap, so events can belong to more than one Hopping window result set. To make a Hopping window the same as a Tumbling window, specify the hop size to be the same as the window size.Box 3: SlidingSliding window functions, unlike Tumbling or Hopping windows, produce an output only when an event occurs. Every window will have at least one event and the window continuously moves forward by an (epsilon). Like hopping windows, events can belong to more than one sliding window.References:
