NEW QUESTION: 1You are given a choice of methods of routing backbone cabling vertically through a building. The one option that you do NOT want to use is:**A.** Metallic raceways**B.** Slots**C.** Elevator shafts**D.** Open shafts**E.** Sleeves**Answer: C**

NEW QUESTION: 2**A.** Yes**B.** No**Answer: B****Explanation:**ExplanationThe Allow/Block/Quarantine policy, or list, feature was designed to help IT organizations control which of the growing number of Exchange ActiveSync-enabled devices are allowed to connect to their Exchange Servers. With this feature, organizations can choose which devices (or families of devices) can connect using Exchange ActiveSync (and conversely, which are blocked or quarantined).

NEW QUESTION: 3**A.** Option A**B.** Option D**C.** Option C**D.** Option B**Answer: D****Explanation:**To carry out multitasking, the operating system sometimes moves process threads among different processors. This is efficient from an operating system point of view, but can reduce SQL Server performance under heavy system loads, as each processor cache is repeatedly reloaded with data. Assigning processors to specific threads can improve performance under these conditions by eliminating processor reloads; such an association between a thread and a processor is called processor affinity.
