**NEW QUESTION: 4**Your network contains a server named Server1 that runs Windows Server 2012 R2. Server1 has the Hyper-V server role installed. Server1 hosts four virtual machines named VM1, VM2, VM3, and VM4. Server1 is configured as shown in the following table. You install a network monitoring application on VM2. You need to ensure that all of the traffic sent to VM3 can be captured on VM2. What should you configure?  
**A.** Resource metering  
**B.** Single-root I/O virtualization  
**C.** The startup order  
**D.** Automatic Start Action  
**E.** NUMA topology  
**F.** Port mirroring  
**G.** Virtual Machine Chimney  
**H.** Integration Services  
**I.** The VLAN ID  
**J.** Resource control  
**K.** Processor Compatibility  
**Answer: F**  
**Explanation:** With Hyper-V Virtual Switch port mirroring, you can select the switch ports that are monitored as well as the switch port that receives copies of all the traffic. And since Port mirroring allows the network traffic of a virtual machine to be monitored by copying the traffic and forwarding it to another virtual machine that is configured for monitoring, you should configure port mirroring on VM2.
