NEW QUESTION: 1You are implementing a method named Calculate that performs conversions between value types and reference types. The following code segment implements the method. (Line numbers are included for reference only.) You need to ensure that the application does not throw exceptions on invalid conversions. Which code segment should you insert at line 04?
A. int balance = (int) (double) amountRef;
B. int balance = amountRef;
C. int balance = (int) (float) amountRef;
D. int balance = (int) amountRef;
Answer: C

NEW QUESTION: 2The primary goal of the TLS Protocol is to provide:
A. Privacy and authentication between two communicating applications
B. Privacy and data integrity between two communicating applications
C. Authentication and data integrity between two communicating applications
D. Privacy, authentication and data integrity between two communicating applications
Answer: B
Explanation:The TLS Protocol is comprised of the TLS Record and Handshake Protocols. The TLS Record Protocol is layered on top of a transport protocol such as TCP and provides privacy and reliability to the communications. The privacy is implemented by encryption using symmetric key cryptography such as DES or RC4. The secret key is generated anew for each connection; however, the Record Protocol can be used without encryption. Integrity is provided through the use of a keyed Message Authentication Code (MAC) using hash algorithms such as SHA or MD5. The TLS Record Protocol is also used to encapsulate a higher-level protocol such as the TLS Handshake Protocol. This Handshake Protocol is used by the server and client to authenticate each other. The authentication can be accomplished using asymmetric key cryptography such as RSA or DSS. The Handshake Protocol also sets up the encryption algorithm and cryptographic keys to enable the application protocol to transmit and receive information.

NEW QUESTION: 3不適切な入力処理が原因である可能性が最も高いのは、次のうちどれですか。
A. データベーステーブルの損失
B. 再起動ループの電源をオフにします
C. ファイアウォールACLの違反
D. 信頼できない証明書の警告
Answer: A

NEW QUESTION: 4Which of the following token profiles is not included in the WS-Security standard as a standard type of identity token?
A. XACML token profile
B. username token profile
C. X.509 token profile
D. Kerberos token profile
E. SAML token profile
Answer: A
Explanation/Reference:The WS-Security specification allows a variety of signature formats, encryption algorithms and multiple trust domains, and is open to various security token models, such as:
* X.509 certificates (not E)
* Kerberos tickets (not D)
* UserID/Password credential (not C)
* SAML Assertions (not B)
* custom-defined tokens.
Note: WS-Security (Web Services Security, short WSS) is a flexible and feature-rich extension to SOAP to apply security

to web services. It is a member of the WS-* family of web service specifications and was published by OASIS.
