**NEW QUESTION: 1**The network administrator has been asked to give reasons for moving from IPv4 to IPv6. What are two valid reasons for adopting IPv6 over IPv4? (Choose two.)  
**A.** Telnet access does not require a password  
**B.** no broadcast  
**C.** autoconfiguration  
**D.** change of source address in the IPv6 header  
**E.** NAT  
**F.** change of destination address in the IPv6 header  
**Answer: B, C**  
**Explanation:** Six Benefits Of IPv6

<http://www.networkcomputing.com/ipv6/six-benefits-of-ipv6/230500009> With IPv6, everything from appliances to automobiles can be interconnected. But an increased number of IP addresses isn't the only advantage of IPv6 over IPv4. In honor of World IPv6 Day, here are six more good reasons to make sure your hardware, software, and services support IPv6.  
**More Efficient Routing** IPv6 reduces the size of routing tables and makes routing more efficient and hierarchical. IPv6 allows ISPs to aggregate the prefixes of their customers' networks into a single prefix and announce this one prefix to the IPv6 Internet. In addition, in IPv6 networks, fragmentation is handled by the source device, rather than the router, using a protocol for discovery of the path's maximum transmission unit (MTU).  
**More Efficient Packet Processing** IPv6's simplified packet header makes packet processing more efficient. Compared with IPv4, IPv6 contains no IP-level checksum, so the checksum does not need to be recalculated at every router hop. Getting rid of the IP-level checksum was possible because most link-layer technologies already contain checksum and error-control capabilities. In addition, most transport layers, which handle end-to-end connectivity, have a checksum that enables error detection.  
**Directed Data Flows** IPv6 supports multicast rather than broadcast. Multicast allows bandwidth-intensive packet flows (like multimedia streams) to be sent to multiple destinations simultaneously, saving network bandwidth. Disinterested hosts no longer must process broadcast packets. In addition, the IPv6 header has a new field, named Flow Label, that can identify packets belonging to the same flow.  
**Simplified Network Configuration** Address auto-configuration (address assignment) is built in to IPv6. A router will send the prefix of the local link in its router advertisements. A host can generate its own IP address by appending its link-layer (MAC) address, converted into Extended Universal Identifier (EUI) 64-bit format, to the 64 bits of the local link prefix.  
**Support For New Services** By eliminating Network Address Translation (NAT), true end-to-end connectivity at the IP layer is restored, enabling new and valuable services. Peer-to-peer networks are easier to create and maintain, and services such as VoIP and Quality of Service (QoS) become more robust.  
**Security** IPSec, which provides confidentiality, authentication and data integrity, is baked into in IPv6. Because of their potential to carry malware, IPv4 ICMP packets are often blocked by corporate firewalls, but

ICMPv6, the implementation of the Internet Control Message Protocol for IPv6, may be permitted because IPSec can be applied to the ICMPv6 packets.

**NEW QUESTION: 2** A network security engineer is asked to provide a report on bandwidth usage. Which tab in the ACC provides the information needed to create the report?  
**A.** Blocked Activity  
**B.** Bandwidth Activity  
**C.** Threat Activity  
**D.** Network Activity  
**Answer: D**  
**Explanation:** The Network Activity tab of the Application Command Center (ACC) displays an overview of traffic and user activity on your network including: Top applications in use Top users who generate traffic (with a drill down into the bytes, content, threats or URLs accessed by the user) Most used security rules against which traffic matches occur In addition, you can also view network activity by source or destination zone, region, or IP address, ingress or egress interfaces, and GlobalProtect host information such as the operating systems of the devices most commonly used on the network.

**NEW QUESTION: 3** Ziehen Sie die WLAN-Komponenten von links auf die richtigen Beschreibungen rechts.  
**Answer:** Explanation:

**NEW QUESTION: 4** You are managing a SharePoint farm in an Active Directory Domain Services (AD DS) forest. The forest contains two domains named americas.contoso.com and europe.contoso.com. A single SharePoint farm is located in the americas.contoso.com domain and uses Kerberos authentication. Users in the europe.contoso.com domain cannot access the Excel Services application in the americas.contoso.com domain when using an external data source. You need to ensure that users in the europe.contoso.com domain can use the Excel Services application with external data sources. What should you do?  
**A.** Deploy a SharePoint farm in the europe.contoso.com domain.  
**B.** Configure anonymous access in the SharePoint farm.  
**C.** Configure basic Kerberos delegation.  
**D.** Configure Kerberos constrained delegation.  
**Answer: A**
