And you will enjoy the right of free update the HP2-I57 exam collection after you bought.

NEW QUESTION: 1You develop an HTML application that is located at [www.adventure-works.com](#). The application must load JSON data from [www.fabrikam.com](#). You need to choose an approach for loading the data. What should you do?
A. Reference the remote data as an XML resource.
B. Add a `crossdomain.xml` file to the second server.
C. Load the data in a JavaScript timeout callback.
D. Configure Cross-Origin Resource Sharing (CORS) on the servers.
Answer: D
Explanation: * Cross-origin resource sharing (CORS) is a mechanism that allows Javascript on a web page to make XMLHttpRequests to another domain, not the domain the Javascript originated from. Such "cross-domain" requests would otherwise be forbidden by web browsers, per the same origin security policy. CORS defines a way in which the browser and the server can interact to determine whether or not to allow the cross-origin request.[2] It is more powerful than only allowing same-origin requests, but it is more secure than simply allowing all such cross-origin requests. * You must use Cross Origin Resource Sharing! It's not as complicated as it sounds... simply set your request headers appropriately... in Python it would look like:

```
self.response.headers.add_header('Access-Control-Allow-Origin', '*');  
self.response.headers.add_header('Access-Control-Allow-Methods', 'GET, POST, OPTIONS');  
self.response.headers.add_header('Access-Control-Allow-Headers', 'X-Requested-With');  
self.response.headers.add_header('Access-Control-Max-Age', '86400');
```

NEW QUESTION: 2 A. Option B B. Option C C. Option A D. Option D **Answer: D**

NEW QUESTION: 3 What are the five aggregation types available to aggregate network links on Isilon?
A. Round-Robin Tx, FEC, Legacy LACP, Active/Passive Failover, Fast Ethernet
