NEW QUESTION: 2Note: This question is part of a series of questions that present the same scenario. Each question In the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.After you answer a question In this section, you will NOT be able to return to It. As a result, these questions will not appear In the review screen.Your network contains an Active Directory domain named contoso.com. The domain contains multiple Hyper-V hosts.You need to deploy several critical line-of-business applications to the network; to meet the following requirements:*The resources of the applications must be isolated from the physical host.*Each application must be prevented from accessing the resources of the other applications.*The configurations of the applications must be accessible only from the operating system that hosts the application.Solution: You deploy a separate Windows container for each application.Does this meet the goal?**A. No****B. Yes****Answer: B****Explanation:**By using Windows Container-The resources of the applications must be isolated from the physical host (ACHIEVED, as a single container could only access its own resources, but not others)-Each application must be prevented from accessing the resources of the other applications. (ACHIEVED, as a single container could only access its own resources, but not others)-The configurations of the applications must be accessible only from the operating system that hosts the application. (ACHIEVED, you can use DockerFile or DockerRun to push configurations to containers from the Container Host OS) References:

NEW QUESTION: 3 How does the system determine the proper storage bin during the putaway operation?
A. The first step is determination of storage type, then the storage section and lastly the target storage bin
B. None of the above
C. The first step is determination of storage bin, then the storage section and lastly the target storage type
D. The first step is determination of storage section, then the storage type and lastly the target storage bin
Answer: A

NEW QUESTION: 4 You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table. You create and enforce an Azure AD Identity Protection user risk policy that has the following settings:
* Assignment: Include Group1, Exclude Group2
* Conditions: Sign-in risk of Medium and above
* Access: Allow access, Require password change
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Answer:
Explanation:
Explanation
Box 1: Yes
User1 is member of Group1. Sign in from unfamiliar location is risk level Medium.
Box 2: Yes
User2 is member of Group1. Sign in from anonymous IP address is risk level Medium.
Box 3: No
Sign-ins from IP addresses with suspicious activity is low.
Note: Azure AD Identity protection can detect six types of suspicious sign-in activities:
* Users with leaked credentials
* Sign-ins from anonymous IP addresses
* Impossible travel to atypical locations
* Sign-ins from infected devices
* Sign-ins from IP addresses with suspicious activity
* Sign-ins from unfamiliar locations
These six types of events are categorized in to 3 levels of risks - High, Medium & Low.
