**NEW QUESTION: 1** A profile-mode queue is configured with MBS = 100 KB, CBS = 50 KB and High-Priority-Only = 40%. Assume there is no CBS overbooking, and the slope-policy is disabled. If the current queue depth is 70 KB, what will happen to an out-of-profile packet when it is transmitted to the queue? **A.** It will contend for shared bufferspace with packets from other queues. **B.** It will be discarded because the high-priority-only threshold has been reached. **C.** It will be stored in the reserved bufferspace and remain out-of-profile. **D.** It will be stored in the reserved bufferspace and become in-profile. **Answer: C**

**NEW QUESTION: 2** Windows Server

2016を執行する300台のAzure仮想マシンを含むAzureサブスクリプションがあります。仮想マシンのシステムログにあるすべての警告イベントを一元的に監視する必要があります。あなたは解決策に何を含めるべきですか？

回答するには、回答領域で適切なオプションを選択します。

注：それぞれ正しい選択は1ポイントの価値があります。**Answer:** Explanation: Explanation: Resource to create in Azure: Dependency Agent The Map feature in Azure Monitor for VMs gets its data from the Microsoft Dependency agent. The Dependency agent relies on the Log Analytics agent for its connection to Log Analytics. So your system must have the Log Analytics agent installed and configured with the Dependency agent. Whether you enable Azure Monitor for VMs for a single Azure VM or you use the at-scale deployment method, use the Azure VM Dependency agent extension to install the agent as part of the experience. In a hybrid environment, you can download and install the Dependency agent manually. If your VMs are hosted outside Azure, use an automated deployment method\* Configuration to perform on the virtual machines: Enable Virtual Machine Scale Set\* To set up Azure Monitor for VMs:\* Enable a single Azure VM or virtual machine scale set by selecting Insights (preview) directly from the VM or virtual machine scale set.\* Enable two or more Azure VMs and virtual machine scale sets by using Azure Policy. This method ensures that on existing and new VMs and scale sets, the required dependencies are installed and properly configured. Noncompliant VMs and scale sets are reported, so you can decide whether to enable them and to remediate them.\* Enable two or more Azure VMs or virtual machine scale sets across a specified subscription or resource group by using PowerShell.
