**NEW QUESTION: 3** Your network contains an Active Directory domain named contoso.com. The domain contains three servers named Server1, Server2, and Server3 that run Windows Server 2016. Server1 has IP Address Management (IPAM) installed. Server2 and Server3 have the DHCP Server role installed and have several DHCP scopes configured. The IPAM server retrieves data

from Server2 and Server3. A domain user named User1 is a member of the groups shown in the following table. On Server1, you create a security policy for User1. The policy grants the IPAM DHCP Scope Administrator Role with the Global access scope to the user. Which actions can User1 perform? To answer, select the appropriate options in the answer area. **Answer:** Explanation: Explanation User1 is using Server Manager, not IPAM to perform the administration. Therefore, only the "DHCP Administrators" permission on Server2 and the "DHCP Users" permissions on Server3 are applied. The permissions granted through membership of the "IPAM DHCP Scope Administrator Role" are not applied when the user is not using the IPAM console.
