NEW QUESTION: 2Ihr Netzwerk enthält eine lokale Active Directory-Domäne mit dem Namen contoso.local. Die Domäne enthält fünf Domänencontroller.Ihr Unternehmen erwirbt Microsoft 365 und erstellt einen Microsoft Anne Active Directory-Mandanten (Azure AD) mit dem Namen .contoso.onmicrosoft.com.Sie möchten die Passthrough-Authentifizierung implementieren.Sie müssen die Umgebung für die geplante Implementierung der Passthrough-Authentifizierung vorbereiten.Welche drei Aktionen sollten Sie ausführen? Jede richtige Antwort zeigt die Lösung. HINWEIS: Jede richtige Auswahl ist einen Punkt wert.**A.** Ändern Sie das E-Mail-Adressattribut für jedes Benutzerkonto.**B.** Installieren Sie auf einem Domänencontroller einen Authentifizierungsagenten.**C.** Fügen Sie in Active Directory-Domänen und -Vertrauensstellungen ein UPN-Suffix hinzu.**D.** Ändern Sie den Benutzeranmeldenamen für

jedes Benutzerkonto.**E.** Konfigurieren Sie im Azure-Portal eine Authentifizierungsmethode.**F.** Fügen Sie im Azure-Portal einen benutzerdefinierten Domänennamen hinzu.**Answer: B,C,F**
Explanation:ExplanationTo implement pass-through authentication, you need to install and configure Azure AD Connect.The on-premise Active Directory domain is named contoso.local. Before you can configure Azure AD Connect, you need to purchase a routable domain, for example, contoso.com.You then need to add the domain contoso.com to Microsoft as a custom domain name.The user accounts in the Active Directory domain need to be configured to use the domain name contoso.com as a UPN suffix. You need to add contoso.com to the Active Directory first by using Active Directory Domains and Trusts to add contoso.com add a UPN suffix. You can then configure each account to use the new UPN suffix.An Authentication Agent is required on a domain controller to perform the authentication when pass-through authentication is used. When the custom domain and user accounts are configured, you can install and configure Azure AD Connect. An Authentication Agent is installed when you select the pass-through authentication option in the Azure AD Connect configuration or you can install the Authentication Agent manually.Reference:

NEW QUESTION: 3Scenario:Please read this scenario prior to answering the QuestionYou have been assigned the role of Lead Enterprise Architect for a manufacturing firm that specializes in musical instruments. The firm has been established for over 100 years, operating in North America for most of that time. In the last ten years, the firm has expanded into European markets and will soon establish a market in Latin America. A future expansion into the Asia Pacific region is also planned.The firm is organized into several business units that each focus on manufacturing particular families of instruments such as brass, woodwind, and percussion. Each business unit has acquired other producers to expand its manufacturing capacity. This has resulted in a complex environment with a high diversity of business and manufacturing systems.The Enterprise Architecture (EA) program within the firm has been functioning for several years. It has made significant progress in consolidating the technology portfolio and establishing key standards. The CIO and the COO are joint sponsors of the EA program. The EA program is mature, with an active Architecture Board and a well-defined architecture process and standard content templates based on the TOGAF 9 Architecture Content Framework. The EA process framework is well coordinated with the PMO, Systems Development, and Operations functions.The firm has completed a strategic plan to reorganize its Sales & Marketing organization according to the four target geographic markets. One of the goals of this reorganization is to improve the ability of Marketing to collect more meaningful market analytics that will enable each sector to better address market needs with effective marketing campaigns and global product presence.A Request for Architecture Work to address the goals of the reorganization has been approved. As the architecture team commences its work, the CIO has expressed concerns about whether the firm will be able to adapt to the proposed architecture and how to manage the associated risks.Refer to the ScenarioYou have been asked how to address the concerns of the CIO.Based on TOGAF 9, which of the following is the best answer?**A.** In Phase A the team should analyze their risk by completing an Implementation Factor Assessment and Deduction Matrix to identify the particular risks associated with the implementation and deployment. The matrix should include a list of factors to be considered, their descriptions, and constraints that should be taken into account. These factors can then be used to assess the initial risks associated with the proposed architecture.**B.** In Phase B, the team should create a set of views that will enable them to identify the factors that will influence the successful introduction of the architecture into the organization. There should then be an assessment of each factor on a maturity scale that will allow the team to gauge the urgency, readiness, and degree of difficulty to fix. These factors can then be used to assess the initial risks associated with the proposed architecture.**C.** In Phase A, the team should use the Business Transformation Readiness Assessment technique to identify the factors that will influence the

successful introduction of the architecture into the organization. The assessment should include determining the readiness rating for each factor based on a maturity scale that will allow the team to gauge the urgency, readiness, and degree of difficulty to fix. These factors can then be used to assess the initial risks associated with the proposed architecture. **D.** In Phase A, the team should conduct a Business Scenario to identify the stakeholders' concerns and the resulting retirements. Once the retirements have been identified, they can be assessed in terms of their risks. The risks should be evaluated in terms of how they could be avoided, transferred, or mitigated. Any risks that cannot be resolved should be identified as residual risks and their disposition should be decided by the Architecture Board. **Answer: C** Explanation: This scenario is upon Request for Architecture Work, which kicks off the Phase A, the Architecture Vision. In this phase, risk should be considered, which is also the CIO's concern in this scenario. One of the approaches in TOGAF is the Business Transformation Readiness Assessment. **Incorrect: Not B:** Implementation Factor Assessment and Deduction Matrix is used for implementation & migration planning (not B).
