NEW QUESTION: 1 You are monitoring the production status on your shop floor. The production operator informs you that a particular resource that was not functioning for the past week is now back in operation. Which option shows the steps to quickly release the work orders affected by this operation, which were put on hold using the mobile application? **A.** Select the infotile On Hold > Select a work order you want to release > Select the work order operation on hold > Swipe left on the work order name > Tap or click the Release action, and click OK **B.** Select the infotile Unreleased > Select a work order you want to release > Swipe left on the work order name > Tap or click the Release action, and click OK **C.** Select the infertile Dispatch List > Select a work order operation you want to release > Swipe left on the work order name > Tap or click the Release action, and click OK **D.** Select the infotile On Hold > Select a work order you want to release > Swipe left on the work order name > Tap or click the Release action, and click OK **Answer: C**

NEW QUESTION: 2 The basic formula for the Black-Scholes Option Pricing Model essentially refs is The difference between the expected present value of the final stock price and the present value of the exercise price. An entity wishes to price a call option written on a nondividend-paying stock using the Black-Scholes Option Pricing Model. The current stock price is US \$50, the exercise price is US \$48. The risk-free interest rate is 5.0%, the option expires in 1 year, and the cumulative probabilities used to calculate the present values of the final stock price and the exercise price are 65 and 58 respectively. If the value of e^{-rt} is .9512. the current value of the call option is: **A.** US \$4.02 **B.** US \$2.00 **Answer C.** US \$4.66 **D.** US \$6.02 **Answer: D** Explanation: C is the current value of a call option with time t in years until expiration, S is the current stock price. $N(d_1)$ is the cumulative probability that a deviation less than d_1 will occur in a standardized normal distribution [$N(d_1)$ is an area to the left of d_1 under the curve for the standard normal distribution], E is the call's exercise price. e^{-rt} is a constant approximately 2.7183, and r is the annualized continuous risk-free rate of return. Thus, the value of the call is:

NEW QUESTION: 3 Which of the following options is incorrect for the IntelliSense engine IAE? **A.** IAE engine's security detection is parallel and uses a message-based file processing mechanism that can receive file fragments and perform security checks. **B.** IAE's content security detection capabilities include application identification and awareness, intrusion prevention, and Web application security. **C.** English full name: Intelligent Awareness Engine. **D.** The core of IAE is to organically integrate all content security related detection functions. **Answer: A**
