NEW QUESTION: 1 You are asked to analyze a SharePoint 2010 system that is experiencing performance problems, especially under heavy loads. The system contains multiple custom Web applications and third-party Web Parts. The performance problems are exhibiting the following symptoms: *The application pool recycles frequently..The system experiences slow client response times..The system experiences excessive page faults.You need to identify a possible source of these performance issues and suggest a way to verify your analysis.What should you do?**A.** Propose that the application pool recycle setting should be changed to recycle less frequently and verify the theory by retesting the system to verify improved performance.**B.** Propose that the custom code in the third-party application is not disposing of its objects properly, and verify the theory by checking the Unified Logging Service (ULS) logs for entries related to the SPRequest object.**C.** Propose that the paging file size is too large, and verify the theory by using the System Monitor to see if the % Usage counter for the paging file is 50% or less.**D.** Propose that the application be moved to a server with a faster disk system that supports fault tolerance and retest the system to verify improved performance.**Answer: B**

NEW QUESTION: 2 **A.** Option B **B.** Option C **C.** Option A **D.** Option D **Answer: B**

NEW QUESTION: 3 Your team is conducting a root analysis (RCA) following a recent, unplanned outage. One of the block volumes attached to your production WebLogic server was deleted and you have tasked with identifying the source of the action. You search the Audit logs and find several Delete actions that occurred in the previous 24 hours. Given the sample of this event.Which item from the event log helps you identify the individual or service that initiated the DeleteVolume API call?**A.** eventSource**B.** requestAgent**C.** requestOrigin**D.** principalId**E.** eventId**Answer: D****Explanation:**ExplanationThe Oracle Cloud Infrastructure Audit service automatically records calls to all supported Oracle Cloud Infrastructure public application programming interface (API) endpoints as log events. Currently, all services support logging by Audit.Every audit log event includes two main parts:* Envelopes that act as a container for all event messages* Payloads that contain data from the resource emitting the event message The identity object contains the following attributes.data.identity.authType The type of authentication used.data.identity.principalId The OCID of the principal.data.identity.principalName The name of the user or service. This value is the friendly name associated with principalId .

NEW QUESTION: 4 A message can be encrypted and digitally signed, which provides _____**A.** Confidentiality, Authentication, Non-repudiation, and Integrity.**B.**

Confidentiality and Authentication
C. Confidentiality and Non-repudiation
D. Confidentiality and Integrity.
Answer: A
Explanation: For the purpose of the exam, one needs to be very clear on all the available choices within cryptography, because different steps and algorithms provide different types of security services: A message can be encrypted, which provides confidentiality. A message can be digitally signed, which provides authentication, nonrepudiation, and integrity. A message can be hashed, which provides integrity. A message can be encrypted and digitally signed, which provides confidentiality, authentication, nonrepudiation, and integrity. The following answers are incorrect: Confidentiality and Authentication Confidentiality and Non-repudiation Confidentiality and Integrity
