NEW QUESTION: 2Which parameter controls how often the CPM looks for Soon-to-be-expired Passwords that need to be changed.**A. ImmediateIntervalB. IntervalC. HeadStartIntervalD. The CPM does not change the password under this circumstanceAnswer: A**

NEW QUESTION: 3You need a persistent and durable storage to trace call activity of an IVR (Interactive Voice Response) system. Call duration is mostly in the 2-3 minutes timeframe. Each traced call can be either active or terminated. An external application needs to know each minute the list of currently active calls. Usually there are a few calls/second, but once per month there is a periodic peak up to 1000 calls/second for a few hours. The system is open 24/7 and any downtime should be avoided. Historical data is periodically archived to files. Cost saving is a priority for this project.What database implementation would better fit this scenario, keeping costs as low as possible?**A. Use DynamoDB with a "Calls" table and a Global Secondary Index on a "State" attribute that can equal to "active" or "terminated".In this way the Global Secondary Index can be used for all items in the table.B. Use RDS Multi-AZ with two tables, one for "ACTIVE_CALLS" and one for"TERMINATED_CALLS".In this way the "ACTIVE_CALLS" table is always small and effective to access.C. Use DynamoDB with a "Calls" table and a Global Secondary Index on a "IsActive" attribute that is present for active calls only.In this way the Global Secondary Index is sparse and more effective.D. Use RDS Multi-AZ with a "CALLS" table and an indexed "STATE" field that can be equal to"ACTIVE" or 'TERMINATED".In this way the SQL query is optimized by the use of the Index.****Answer: C**Explanation:

<https://aws.amazon.com/dynamodb/faqs/Q:> Can a global secondary index key be defined on non-unique attributes?Yes. Unlike the primary key on a table, a GSI index does not require the indexed attributes to be unique.Q: Are GSI key attributes required in all items of a DynamoDB table?No. GSIs are sparse indexes. Unlike the requirement of having a primary key, an item in a DynamoDB table does not have to contain any of the GSI keys. If a GSI key has both hash and range elements, and a table item omits either of them, then that item will not be indexed by the corresponding GSI. In such cases, a GSI can be very useful in efficiently locating items that have an uncommon attribute.
