NEW QUESTION: 3 Refer to the exhibit. For which reason could a BGP-speaking device in autonomous system 65534 be prevented from installing the given route in its BGP table?**A.** BGP is designed only for publicly routed addresses.**B.** BGP does not allow the AS number 65535.**C.** The AS number of the BGP is specified in the given AS_PATH.**D.** The origin of the given route is unknown.**E.** The AS_PATH for the specified prefix exceeds the maximum number of ASs allowed.**Answer: C****Explanation:**BGP is considered to be a 'Path Vector' routing protocol rather than a distance vector routing protocol since it utilises a list of AS numbers to describe the path that a packet should take. This list is called the AS_PATH. Loops are prevented because if a BGP speaking router sees it's own AS in the AS_PATH of a route it rejects the route.
