**NEW QUESTION: 1** Which statement about Cisco ACS authentication and authorization is true?  
**A.** ACS can use only one authorization profile to allow or deny requests.  
**B.** ACS uses TACACS to proxy other authentication servers.  
**C.** ACS servers can be clustered to provide scalability.  
**D.** ACS can query multiple Active Directory domains.  
**Answer: C**  
**Explanation:** Explanation ACS can join one AD domain. If your Active Directory structure has multi-domain forest or is divided into multiple forests, ensure that trust relationships exist between the domain to which ACS is connected and the other domains that have user and machine information to which you need access. So B is not correct. Source:

[http://www.cisco.com/c/en/us/td/docs/net\\_mgmt/cisco\\_secure\\_access\\_control\\_system/5-8/ACS-ADIntegration/guide/Active\\_Directory\\_Integration\\_in\\_ACS\\_5-8.pdf](http://www.cisco.com/c/en/us/td/docs/net_mgmt/cisco_secure_access_control_system/5-8/ACS-ADIntegration/guide/Active_Directory_Integration_in_ACS_5-8.pdf) + You can define multiple authorization profiles as a network access policy result. In this way, you maintain a smaller number of authorization profiles, because you can use the authorization profiles in combination as rule results, rather than maintaining all the combinations themselves in individual profiles. So D. is not correct + ACS 5.1 can function both as a RADIUS and RADIUS proxy server. When it acts as a proxy server, ACS receives authentication and accounting requests from the NAS and forwards the requests to the external RADIUS server. So C. is not correct. Source:

**Answer: A,C**  
Explanation  
Kinesis Data Streams and Kinesis Client Library (KCL) - Data from the data source can be continuously captured and streamed in near real-time using Kinesis Data Streams. With the Kinesis Client Library (KCL), you can build your own application that can preprocess the streaming data as they arrive and emit the data for generating incremental views and downstream analysis. Kinesis Data Analytics - This service provides the easiest way to process the data that is streaming through Kinesis Data Stream or Kinesis Data Firehose using SQL. This enables customers to gain actionable insight in near real-time from the incremental stream before storing it in Amazon S3.
