アナリストは、Webサイトが何百万というリクエストを受け取り、サービスが利用できなくなったことに気づいています。

次のうちウェブサイトの可用性を維持するために実装できるものはどれですか？ **A. DMZ**

B. Whitelisting
C. MAC filtering
D. Honeypot
E. VPN
Answer: B

NEW QUESTION: 2 A network technician is attempting to locate a switch connected to the fourth floor west side of the building. Which of the following will allow quick identification of the switch, when looking at a logical diagram? **A. Building layout**
B. Naming conventions
C. Packet sniffing
D. Patch panel labeling
Answer: B
Explanation: The building in this question has several floors and the floors are large enough to be identified by area such as 'west side' etc. It is likely that a logical diagram of the network in such a building would be quite complicated and the network is likely to have several switches. A naming convention is a standard for naming items, in this case, networking components. When it comes to naming switches, using

names like Switch1, Switch2 etc. for example won't help when you need to know where the switches are located. In a building with multiple floors with each floor large enough to be defined by area names, you could use a naming convention like SW1-FL4-WS where SW1 identifies the item as a Switch with the number 1, FL4 identifies the location as Floor 4 and WS further identifies the location as West Side. Using this convention, switch number 2 on the third floor east side would be named SW2-FL3-ES.

NEW QUESTION: 3 Your network contains an Active Directory domain named contoso.com. The domain contains an IP Address Management (IPAM) server that uses a Windows Internal Database. A. Set-IpamConfiguration
B. Move-IpamDatabase
C. Disable-IpamCapability
D. Update-IpamServer
Answer: B
