The version of APP (Online Test Engine), Valid 250-586 Exam Simulator it can be applied to all kinds of electronic devices that support it.

NEW QUESTION: 1 Which statement is TRUE regarding network firewalls preventing Web Application attacks?
A. Network firewalls cannot prevent attacks because they are too complex to configure.
B. Network firewalls can prevent attacks because they can detect malicious HTTP traffic.
C. Network firewalls cannot prevent attacks because ports 80 and 443 must be opened.
D. Network firewalls can prevent attacks if they are properly configured.
Answer: C
Explanation: Network layer firewalls, also called packet filters, operate at a relatively low level of the TCP/IP protocol stack, not allowing packets to pass through the firewall unless they match the established rule set. To prevent Web Application attacks an Application layer firewall would be required.
