NEW QUESTION: 1In WBS diagramming, the work package is:**A.** All of the tasks in the project.**B.** Collection of the lower level tasks to be completed.**C.** Lowest level task to be completed**D.** Collection of tasks to be done by one individual or group**E.** All the tasks to be done by one organizational unit.**Answer: B**

NEW QUESTION: 2A customer's Avaya Contact Recorder (ACR) has been in production for the last 5 years. Recently you have noticed that that the var partition is low on disk space, even after performing the database vacuum and clearing unwanted files from the partition.What is the first step that must be performed to bring the size down?**A.** Go to General Setup -> Recorder and change "Allow Full Database Vacuum on Startup if required".**B.** Identify the customer retention requirement, Login to the PostgreSQL, and delete the old call details manually.**C.** Identify the customer retention requirement, and delete the old call recording from the call partition.**D.** Identify the customer retention requirement, and Go to General Setup -> Recorder and change the"Retain call details for (months)" setting on the ACR webpage.**Answer: D**

NEW QUESTION: 3Scenario:Please read this scenario prior to answering the QuestionYou are serving as the Chief Architect for a large, global commodities trading company which has been growing rapidly through a series of acquisitions.Each business is performing well in its markets. However, the lack of integration between headquarters and the business units has increasingly caused problems in the handling of customer and financial information. The inability to share information across businesses has resulted in lost opportunities to "leverage the synergies" that had been intended when the businesses were acquired. At present, each business unit maintains its own applications. Despite an earlier initiative to install a common application to manage customer, products, supplier, and inventory information, each business unit has different ways of defining each of these core elements and has customized the common application to the point where the ability to exchange information is difficult, costly, and error-prone.As a result, the company has made the decision to introduce a single enterprise-wide application to consolidate information from several applications that exist across the lines of business. The application will be used by all business units and accessed by

suppliers through well defined interfaces. The Corporate Board is concerned that the new application must be able to manage and safeguard confidential customer information in a secure manner that meets or exceeds the legal requirements of the countries in which the company operates. This will be an increasingly important capability as the company expands its online services in cooperation with its trading partners. The CIO has formed an Enterprise Architecture department, and one of the primary goals in its charter is to coordinate efforts between the implementation team and the business unit personnel who will be involved in the migration process. The CIO has also formed a cross-functional Architecture Board to oversee and govern the architecture. The company has an existing team of security architects. TOGAF 9 has been selected for use for the Enterprise Architecture program. The CIO has endorsed this choice with the full support of top management. Refer to the Scenario In the Preliminary Phase you need to define suitable policies and ensure that the company has the appropriate capability to address the concerns of the Corporate Board. Based on TOGAF 9, which of the following is the best answer? **A.** You evaluate the implications of the Board's concerns by examining the security and regulatory impacts on business goals, business drivers and objectives. Based on your understanding, you then update the current security policy to include an emphasis on the concerns. You define architecture principles to form constraints on the architecture work to be undertaken in the project. You then allocate a security architect to ensure that security considerations are included in the architecture planning for all domains. **B.** You identify and document the security and regulatory requirements for the application and the data being collected. You ensure that written policies are put in place to address the requirements, and that they are communicated across the organization, together with appropriate training for key employees. You identify constraints on the architecture and communicate those to the architecture team. You establish an agreement with the security architects defining their role within the ongoing architecture project. **C.** You evaluate the implications of the concerns raised by the Corporate Board in terms of regulatory requirements and their impact on business goals and objectives. Based on this understanding, you then issue a Request for Architecture Work to commence an architecture development project to develop a solution that will address the concerns. You allocate a security architect to oversee the implementation of the new application that is being developed. **D.** You start by clarifying the intent that the Board has for raising these concerns. This enables you to understand the implications of the concern in terms of regulatory requirements and the potential impact on current business goals and objectives. You propose that a security architect or security architecture team be allocated to develop a comprehensive security architecture and that this be considered an additional domain architecture. **Answer: A** Explanation: Explanation Incorrect: Not C: Implied that solution needs be developed to address the concern, instead of address the concern in the ERP solution itself.
